Part 2

Practical Spring AI

This section focuses on applying Spring AI to practical, real-world projects. Readers will build applications for multilingual message translation, music recognition, and AI-driven gameplay using Connect 4. Along the way, they will learn about speech processing, vector databases, similarity search, structured interactions, prompt templates, and how multiple AI models reason and respond in dynamic scenarios.

This part of the book includes the following chapters:

- *Chapter 4*, *Real-Time Message Translation*
- *Chapter 5*, *Beat Shazam*
- *Chapter 6*, *Connecting the Dots*
