Table of Contents

1. About This eBook
2. Preface
3. Acknowledgments
4. 1. Fundamental Programming Structures
    1. 1.1. Our First Program
    2. 1.2. Primitive Types
    3. 1.3. Variables
    4. 1.4. Arithmetic Operations
    5. 1.5. Strings
    6. 1.6. Input and Output
    7. 1.7. Control Flow
    8. 1.8. Arrays and Array Lists
    9. 1.9. Functional Decomposition
    10. Exercises
5. 2. Object-Oriented Programming
    1. 2.1. Working with Objects
    2. 2.2. Implementing Classes
    3. 2.3. Object Construction
    4. 2.4. Records
    5. 2.5. Static Variables and Methods
    6. 2.6. Packages
    7. 2.7. Nested Classes
    8. 2.8. Documentation Comments
    9. Exercises
6. 3. Interfaces and Lambda Expressions
    1. 3.1. Interfaces
    2. 3.2. Static, Default, and Private Methods
    3. 3.3. Examples of Interfaces
    4. 3.4. Lambda Expressions
    5. 3.5. Method and Constructor References
    6. 3.6. Processing Lambda Expressions
    7. 3.7. Lambda Expressions and Variable Scope
    8. 3.8. Higher-Order Functions

9. 3.9. Local and Anonymous Classes
10. Exercises
7. 4. Inheritance and Reflection
    1. 4.1. Extending a Class
    2. 4.2. Inheritance Hierarchies
    3. 4.3. `Object` : The Cosmic Superclass
    4. 4.4. Enumerations
    5. 4.5. Pattern Matching
    6. 4.6. Runtime Type Information and Resources
    7. 4.7. Reflection
    8. Exercises
8. 5. Exceptions, Assertions, and Logging
    1. 5.1. Exception Handling
    2. 5.2. Assertions
    3. 5.3. Logging
    4. Exercises
9. 6. Generic Programming
    1. 6.1. Generic Classes
    2. 6.2. Generic Methods
    3. 6.3. Type Bounds
    4. 6.4. Type Variance and Wildcards
    5. 6.5. Generics in the Java Virtual Machine
    6. 6.6. Restrictions on Generics
    7. 6.7. Reflection and Generics
    8. Exercises
10. 7. Collections
    1. 7.1. An Overview of the Collections Framework
    2. 7.2. Iterators
    3. 7.3. Sets
    4. 7.4. Maps
    5. 7.5. Other Collections
    6. 7.6. Views
    7. Exercises
11. 8. Streams
    1. 8.1. From Iterating to Stream Operations
    2. 8.2. Stream Creation
    3. 8.3. The `filter` , `map` , and `flatMap` Methods
    4. 8.4. Extracting Substreams and Combining Streams

5. 8.5. Other Stream Transformations
6. 8.6. Simple Reductions
7. 8.7. The Optional Type
8. 8.8. Collecting Results
9. 8.9. Collecting into Maps
10. 8.10. Grouping and Partitioning
11. 8.11. Downstream Collectors
12. 8.12. Reduction Operations
13. 8.13. Primitive Type Streams
14. 8.14. Parallel Streams
15. Exercises

12. 9. Processing Input and Output
    1. 9.1. Input/Output Streams, Readers, and Writers
    2. 9.2. Paths, Files, and Directories
    3. 9.3. HTTP Connections
    4. 9.4. Regular Expressions
    5. 9.5. Serialization
    6. Exercises
13. 10. Concurrent Programming
    1. 10.1. Concurrent Tasks
    2. 10.2. Thread Safety
    3. 10.3. Threadsafe Data Structures
    4. 10.4. Parallel Algorithms
    5. 10.5. Asynchronous Computations
    6. 10.6. Atomic Counters and Accumulators
    7. 10.7. Locks and Conditions
    8. 10.8. Threads
    9. 10.9. Processes
    10. Exercises
14. 11. Annotations
    1. 11.1. Using Annotations
    2. 11.2. Defining Annotations
    3. 11.3. Annotations in the Java API
    4. 11.4. Processing Annotations at Runtime
    5. 11.5. Source-Level Annotation Processing
    6. Exercises
15. 12. The Java Platform Module System
    1. 12.1. The Module Concept

2. 12.2. Naming Modules
3. 12.3. The Modular “Hello, World!” Program
4. 12.4. Requiring Modules
5. 12.5. Exporting Packages
6. 12.6. Modules and Reflective Access
7. 12.7. Modular JARs
8. 12.8. Automatic Modules
9. 12.9. The Unnamed Module
10. 12.10. Command-Line Flags for Migration
11. 12.11. Transitive and Static Requirements
12. 12.12. Qualified Exporting and Opening
13. 12.13. Service Loading
14. 12.14. Tools for Working with Modules
15. Exercises
16. Index

Previous chapter
‹ Core Java for the Impatient, 4th Edition
