Part II: Figures

1.1 UML Notation for Classes
1.2 UML Notation for Objects
1.3 Class Diagram Showing Static Members of a Class
1.4 Members of a Class
1.5 Class Diagram Depicting Inheritance Relationship
1.6 Class Diagram Depicting Aggregation
2.1 Primitive Data Types in Java
2.2 Widening Primitive Conversions
2.3 Overflow and Underflow in Floating-Point Arithmetic
2.4 Numeric Promotion in Arithmetic Expressions
3.1 Array of Arrays
3.2 Parameter Passing: Primitive Data Values
3.3 Parameter Passing: Reference Values
3.4 Parameter Passing: Arrays
4.1 Activity Diagram for `if` Statements
4.2 Form of the `switch` Statement with the Colon Notation
4.3 Activity Diagram for the `switch` Statement with the Colon Notation
4.4 Form of the `switch` Statement with the Arrow Notation
4.5 Activity Diagram for the `switch` Statement with the Arrow Notation
4.6 Activity Diagram for the `while` Statement
4.7 Activity Diagram for the `do-while` Statement
4.8 Activity Diagram for the `for` Statement
4.9 Enhanced `for` Statement
5.1 Inheritance Hierarchy
5.2 Inheritance Hierarchy for Example 5.2
5.3 Class Diagram for Example 5.8
5.4 Inheritance Hierarchies for Classes and Interfaces in Example 5.10
5.5 Inheritance Relationships for Interface Constants
5.6 Reference Type Hierarchy: Arrays and Subtype Covariance
5.7 Type Hierarchy to Illustrate Polymorphism
5.8 A Domain Model as Represented by Inheritance Hierarchy
5.9 Sealed Classes for Domain Modeling of Inheritance Hierarchy
5.10 Sealed Classes and Interfaces

6.1 Java Source File Structure
6.2 Package Structure
6.3 Compiling Code into Package Directories
6.4 Searching for Classes
6.5 Accessibility of Class Members
6.6 Block Scope
7.1 Normal Method Execution
7.2 Exception Propagation
7.3 Partial Exception Inheritance Hierarchy
7.4 The `try-catch-finally` Construct
7.5 Exception Handling (Scenario 1)
7.6 Exception Handling (Scenario 2)
7.7 Exception Handling (Scenario 3)
8.1 Partial Inheritance Hierarchy in the `java.lang` Package
8.2 Converting Values among Primitive, Wrapper, and `String` Types
8.3 Incidental Whitespace in Text Blocks
9.1 Overview of Type Declarations
9.2 Static Member Classes and Interfaces
9.3 Outer Object with Associated Inner Objects
9.4 Non-Static Member Classes and Inheritance
9.5 Local Classes and Inheritance Hierarchy
10.1 Memory Organization at Runtime
11.1 Extending Generic Types
11.2 No Subtype Covariance for Parameterized Types
11.3 Partial Type Hierarchy for `Node<? extends Number>`
11.4 Partial Type Hierarchy for `Node<? super Integer>`
11.5 Partial Type Hierarchy for Selected Parameterized Types of `Node<E>`
12.1 Partial `ArrayList` Inheritance Hierarchy
15.1 The Core Interfaces
15.2 The Core Collection Interfaces and Their Implementations
15.3 The Core Map Interfaces and Their Implementations
15.4 Bulk Operations on Collections
16.1 Data Processing with Streams
16.2 The Core Stream Interfaces
16.3 Filtering Stream Elements
16.4 Selecting Distinct Elements
16.5 Skipping Elements at the Head of a Stream
16.6 Truncating a Stream
16.7 Mapping
16.8 Incorrect Solution to the Query

16.9 Mapping a Stream of Streams
16.10 Flattening Streams
16.11 Reducing with an Initial Value
16.12 Parallel Functional Reduction
16.13 Sequential Mutable Reduction
16.14 Parallel Mutable Reduction
16.15 Collecting to a Map
16.16 Grouping
16.17 Multilevel Grouping as a Two-Dimensional Matrix
16.18 Partitioning
18.1 Core Classes for Formatting in the `java.text` Package
19.1 Structure of JDK 17 Installation
19.2 Partial Module Graph of Java SE 17 Modules
19.3 Modules and Module Declarations
19.4 Module Graph and Implicit Dependencies
19.5 Module Declarations and Module Graph
19.6 Implied Module Dependencies
19.7 Qualified Export
19.8 Module Graph of the `adviceApp` Application
19.10 Exploded Module Structure for the `model` Module
19.9 Application Directory Structure
19.11 Module Graph and Module Declarations
19.12 Compiling Exploded Modules Containing Source Code
19.13 Compiling the `model` Module
19.14 Creating Modular JARs
19.15 Module Graph and Module Declarations for Services
19.16 Bottom-Up Strategy for Code Migration
19.17 Top-Down Strategy for Code Migration
19.18 Module Graph Using the `jdeps` Tool
20.1 Partial Byte Stream Inheritance Hierarchies in the `java.io` Package
20.2 Stream Chaining for Reading and Writing Binary Values to a File
20.3 Selected Character Streams in the `java.io` Package
20.4 Setting Up a `PrintWriter` to Write to a File
20.5 Setting Up Readers to Read Characters
20.6 Buffered Writers
20.7 Buffered Readers
20.8 Keyboard and Display as Console
20.9 Object Stream Chaining
21.1 Creating `Path` Objects
22.1 Runtime Data Areas

22.2 Spawning Threads Using a `Runnable` Object
22.3 Spawning Threads—Extending the `Thread` Class
22.4 Thread States
22.5 Starting a Thread
22.6 Running and Yielding
22.7 Blocked for Lock Acquisition
22.8 Sleeping and Waking Up
22.9 Timed Waiting and Notifying
22.10 Thread Coordination
22.11 Timed Joining of Threads
22.12 Blocked for I/O
22.13 Thread Termination
22.14 Deadlock
23.1 Executor Interfaces in the `java.util.concurrent` Package
23.2 Executor Service Lifecycle
23.3 Selected Interfaces and Classes in the Lock API
23.4 Concurrent Collections in the `java.util.concurrent` Package
23.5 Concurrent Maps in the `java.util.concurrent` Package
23.6 Blocking Queues in the `java.util.concurrent` Package
23.7 Copy-on-Write Collections in the `java.util.concurrent` Package
24.1 Layered Database Connectivity
25.1 API Documentation of a Deprecated Method
25.2 Selected Types from the Reflection API
