Part I: Examples

1.1 Using Record Patterns in the `instanceof` Pattern Match Operator

1.2 Using Record Patterns in Streams

1.3 Using Generic Record Patterns Parameterized with Sealed Types

3.1 Using a Logger

3.2 Creating and Running a Virtual Thread

3.3 Using Thread Builders to Create Threads

3.4 Selected Aspects of Threads

3.5 Using a Virtual Thread Factory to Create Virtual Threads

3.6 Using One-Thread-Per-Task Executor Service

3.7 Virtual Thread Execution and Scalability

3.8 Pinning of Virtual Threads

C.1 Searching for a Substring in an Open Range of a String

C.2 Repeatedly Appending a Character Sequence to a String Buffer

C.3 Creating Locales using the Overloaded `Locale.of()` Method
