Appendix C. SRE Team Charter Team Example

gShoe SRE Charter

Status: Approved
Author(s): westley
Last updated: 2023-10-09
Reviewer(s): inigo
Approver: humperdinck

Mission

Make the gShoe ecosystem reliable, resilient, scalable, and fast to market.

Scope

gShoe SRE provides production expertise to the gShoe flagship product and the wider wearables product area by engaging with product development throughout the product lifecycle: design, implementation, productionization, launch, maintenance, and deprecation.

Services

- gShoe (the main product): SRE provides deep engagement and on-call support for the entire server-side stack and is responsible for client-side SLO measurement.
- Wearables backend infrastructure: SRE provides deep engagement and on-call support for the shared infrastructure (shared backend, databases, data processing pipelines).
- Other wearable services: SRE provides consultation, production-related project work, and an IRT escalation rotation.

Success

- All critical user-facing services have 100% SLO coverage and SLO compliance for their most critical user journeys.
- Org-wide toil is reduced by 50% compared to 2022.
- All PA services run on the common production platform.
- Time required for launch preparation is reduced from 3 months to 1 month.
- Average resource utilization is at least 60% and the products can handle 5× load spikes gracefully for 1 hour.
- SRE and dev partners have a shared team identity.

Values

gShoe SRE believes that we're running a marathon, not a sprint. We will:

- Walk a mile in our users' shoes.
- Keep our eyes on the finish line and finish what we start.
- Pick ourselves up when we stumble.
- Cheer on our teammates and coworkers.
- Take hydration breaks and sometimes detour to smell the roses.
