# Index

## Symbols

3-2-1 backup strategy, Snapshots Versus Backups

## A

absent phase, organizational reliability, Absent
abstractions, building platforms, Abstractions and Coupling
accelerator hardware
- capacity planning, Utilization, Efficiency, and Capacity Planning, Fragmentation loss
- centralized fleet management, Centralized Fleet Management to Enable Agility
- fungibility, Accelerator Hardware Fungibility-Accelerator Hardware Fungibility
- qualifying for production, Product Lifecycle Integration
- schedulers, Scheduling Primitives-Scheduling Primitives
- SLO-eligible accelerators, What It Means for Accelerators to be SLO-Eligible

access control, observability data, Access control
accident analysis, STPA and CAST: Analysis Methods Based on STAMP-CAST: Backward-Looking Accident Analysis
- CAST, advantages, Why CAST?-Why CAST?

accident causality models, Safety Engineering for SRE with STPA and CAST
accountability, blameless cultures, Blamelessness and blame awareness
adaptive signal filtering, The Trend Toward Intent-Based Coordination Systems
adaptive throttling, overload management, Client-Side Controls-Client-Side Controls
adopting SRE, What to Consider When Adopting SRE-What to Consider When Adopting SRE, Practical Considerations
- capabilities models, Case study: Large financial services firm
- existing brownfield systems, The Brownfield Evolution: Cultivating Reliability in Existing Systems-Spread the word and iterate
- model services, Case study: National retail chain

- new greenfield systems, The Greenfield Design: Engineering Reliability from Day Zero-Establish operational readiness from the start

agentic testing, Agentic Testing

- agentic tool use, Agentic tool use (level 3)-Agentic tool use (level 3)
- code generator level, Agents generating code, data, content, etc. (level 2)-Agents generating code, data, content, etc. (level 2)
- software authoring level, "Classic" software authoring (level 1)-"Classic" software authoring (level 1)

AI (artificial intelligence), How SRE Supports AI

- cultivating trust in, Sociotechnical Foundations
- early support, How SRE Supports AI-How SRE Supports AI
- feature launch, best practices, Launching an AI Feature-Launching an AI Feature
- Google capacity planning case study, Case Study: Scaling Google for the AI Age-Lessons Learned
- impact on SRE skills, Identifying your target audiences and their training needs
- incident response, The Role of AI in Incident Response
  - change management considerations, Autonomy in Production
  - detection and triage, Detection and Triage
  - human oversight considerations, A North Star for Agent Safety-A North Star for Agent Safety
  - hypothesis generation, Hypothesis Generation
  - investigation, Investigation
  - on-call handoff, On-call Handoff
  - outage communication, Outage Communication
- increasing use of, changing role of humans, The Role of Humans-The Role of Humans
- infrastructure complexity, capabilities needed, Structuring for Evolution-Structuring for Evolution
- integration into infrastructure, The AI Infrastructure Explosion-The AI Infrastructure Explosion
- locating resilience gaps, Verifying Resilience
- observability considerations, The Observability of AI Systems
- proactive monitoring, Observability and AI-AI Approaches to Proactive Monitoring
- probabilistic operation, consequences, Complexity, Scale, and Risk
- production health, AI and SRE
- production pipeline, stages, The AI Infrastructure Explosion
- role in resilience, Failures Without People
- safety architecture considerations, The Safety and Reliability of AI Solutions

- service level objectives, Service Level Objectives in AI Systems-Service Level Objectives in AI Systems
- service reliability considerations, The Safety and Reliability of AI Solutions-The Safety and Reliability of AI Solutions
- SLO optimizations, Supporting infrastructure
- software development, The SDLC Under Tension and Transition-Production Work in the Era of AI Dev
- SRE evolution, Evolving the Practice of SRE with AI-Evolving the Practice of SRE with AI
- SRE support for AI workloads, How SRE Supports AI Workloads
- toil reduction, AI for Toil Reduction

AI agents, Applications and Agents
- agentic testing, Agentic Testing-Agentic tool use (level 3)
- changes to system risk, The Safety and Reliability of AI Solutions-The Safety and Reliability of AI Solutions
- generating incident-specific insights, Managing Incident Complexity-Managing Incident Complexity

AI dev
- incident response issues, Incidents
- observability issues, Observability and Monitoring
- rate of code change
  - effect on resolving production problems, Rate of Change-Rate of Change
  - versioning issues, Versioning
- skill erosion issues, Skill Erosion
- strategic incoherence, technical debt, Strategic Incoherence and Technical Debt

AI infrastructure, energy consumption considerations, Energy Consumption and Sustainability-Shifting Landscape
- oversubscribing, Power Oversubscription
- power optimization, Optimization Principles
- safety considerations, Safety Principles-Safety Principles

AI infrastructure, energy consumption considerations, error budget for SLOs, SLOs

AI Operator case study, Case Study: AI Operator-Case Study: AI Operator

AI systems
- applications, Applications and Agents
- architecture, Delivering AI and ML Systems-Delivering AI and ML Systems
- capacity planning, challenges, Practical Observability and Capacity Challenges
- model serving stack, Model Serving
- observability issues, Practical Observability and Capacity Challenges
- production-quality feature launch, best practices, Launching an AI Feature-Launching an AI Feature

- reliability, measuring, AI Reliability-AI Reliability
- security
  - challenges, Threats and Challenges-Threats and Challenges
  - enhanced observability considerations, Enhanced Observability for AI Security
  - policies and threat models, Scaling Through the Platform-Scaling Through the Platform
- SLOs (service level objectives), Service Level Objectives in AI Systems-Service Level Objectives in AI Systems
- SRE support, How SRE Supports AI Workloads

AI/ML-assisted incident investigation, observability, Observability and Monitoring
alert configuration service, Automatic Alert Configurations on SLOs
alerting systems, handling relative metrics, Extending Confidence Intervals to Relative Metrics: Alerting on Latencies
alerts
- automatic dashboard creation, From Investigation to Automatic Mitigation
- binomial distribution, Alerting with the Binomial Distribution-Composing SLOs
- binomial testing, Automatic Alert Configurations on SLOs
- error rates
  - machine learning model, Handling Cyclical Metrics with Machine Learning
  - post-alert analysis, A Cost-Effective Application: Post-Alert Analysis
  - Wilson's confidence interval, A Statistical Approach for Error Rates
- intelligent, From Static Thresholds to Intelligent Alerting-From Static Thresholds to Intelligent Alerting
- latency, statistical techniques, The Mathematics of Latency Alerting-The Mathematics of Latency Alerting
- per-customer, The Motivation for Per-Customer Reliability
- unactionable, measuring, Measuring Operational Workload

analytics monitoring systems
- design considerations, Analytics monitoring systems
- user experience considerations, Seamless User Experience

analytics telemetry, High-Availability Telemetry Versus Analytics Telemetry, Analytics Telemetry-Analytics Telemetry
- requirements, Analytics Telemetry

application frameworks, production platforms, Frameworks-Frameworks
applications
- AI systems, Applications and Agents
- automation, Levels of Automation

Arbon, Jason, Getting Started with Testing

architecture, AI and ML systems, Delivering AI and ML Systems-Delivering AI and ML Systems
artificial intelligence (see AI)
asset taxonomies, observability, Observability and Monitoring-Observability and Monitoring
assisted tier (SRE engagement), A Tiered Engagement Model
attrition, managing, Attrition and Retention-Attrition and Retention
automated deployments, Establish operational readiness from the start
automation
- advantages, Automation and Tooling-Automation and Tooling
- antipatterns, Automating restarts for a memory leak
- applying selectively, Humans in the loop-Humans in the loop
- benefits to infrastructure, Infrastructure Design
- capacity planning, Automating Capacity Planning
- cost considerations, Scaling Automation
- framework for deciding when to, A Framework for Decision-Making-Nonquantifiables
- human-centered design, Human Factors in Automation-Team Implications
- importance of complete automation, The Final Stretch and Fostering Collaboration
- incident postmortems, Evolving the Learning from Incident Practices
- incident response, Autonomy and authority to prevent incidents
- incremental implementation, Incremental Automation-The Benefits of an Incremental Approach
- initial considerations, Important Early Considerations
- levels, Levels of Automation-Levels of Automation
- model checking, Model checking
- network hardware fault mitigation, Automated hardware fault mitigation
- pitfalls, When to Automate and When Not To-The Pitfalls, Automated hardware fault mitigation
- regional rollout system, Automated regional rollout system
- restarts for memory leaks, Automating restarts for a memory leak
- scaling, Scaling Automation
  - capacity provisioning example, Example: Capacity Provisioning-Example: Capacity Provisioning
  - incident management example, Example: Incident Management-Example: Incident Management
- software engineering mindset, A Software Engineering Approach to Operations
- tools, sizing services, Example: Capacity Provisioning-Example: Capacity Provisioning

- Traffic Director, Coevolution of Distributed Systems and Automation at Scale-Coevolution of Distributed Systems and Automation at Scale
automation lifecycle, Example: Capacity Provisioning-Example: Capacity Provisioning
autonomous self-optimization, Infrastructure Trends
availability reporting, SLOs, Measuring SLO Failure Concentration-Measuring SLO Failure Concentration
availability thresholds, SLIs, Recommendations for Beginners

## B

B2B SAAS startup, retrofitting SRE practices case study, Case Study: Rapidly Scaling B2B SaaS Startup-The results
backup plans, Creating a Backup Plan
- configuration, Decide on the Backup Configuration for Each Bucket
- data source catalog, Classify Your Data Sources
- implementing, Implement the Backup Plan
- lifecycle components, The Planning Framework
- setting objectives, Set the Objectives for Each Bucket
- writing, Write the Backup Plan-Write the Backup Plan

backups
- 3-2-1 strategy, Snapshots Versus Backups
- compared to snapshots, Snapshots Versus Backups-Snapshots Versus Backups
- smart compared to simple, Smart or Simple?-Smart or Simple?
- types, Full backups-Differential backups

bad minute model, High Noise Floor
Bainbridge, Lisanne, When to Automate and When Not To
banks, retrofitting SRE practices case study, Case Study: Large Multinational Investment and Consumer Bank-The results
baseline tier (SRE engagement), A Tiered Engagement Model
BC/DR (business continuity and disaster recovery) programs, Organizations Rethinking Reliability, Introduction to DiRT
Bernoulli trial, Alerting with the Binomial Distribution
Bigtable (distributed storage system), Google's Production Environment
- data recovery policy, Creating a Data Recovery Policy
- data retention case study, Data retention

binary failures, Organizations Rethinking Reliability
binomial distribution, alerting, Alerting with the Binomial Distribution-Composing SLOs
binomial testing, alerts, Automatic Alert Configurations on SLOs

blame awareness, Blamelessness and blame awareness
blameless postmortems, Introduce blameless postmortems, Principles and Practices
blamelessness, Blamelessness and blame awareness
  - balancing with accountability, Evolving the Learning from Incident Practices
  - postmortems, Introduce blameless postmortems
blended SRE engagement scope, Blended
Blobstore, Google's Production Environment
Boq (developer platform), Platformization
Borg (cluster operating system), Google's Production Environment
BoringSSL, Fiat Cryptography and BoringSSL
Brewster, Benjamin, Testing
Brookbank, James, Effectiveness, Effectiveness
brownfield systems
  - applying best practices, limiting risk, Green Fields and Brown Fields-Green Fields and Brown Fields
  - building reliability-focused culture, The Brownfield Evolution: Cultivating Reliability in Existing Systems-Spread the word and iterate
  - uniformity with greenfield systems, The Role of Uniformity
budgets
  - error budgets, The Basics of SLOs
  - SRE engagement considerations, SLOs and error budgets-SLOs and error budgets
bugs (software), Incidents, Outages, and Bugs
  - data inconsistencies, Application-level verification
burn rate, The Basics of SLOs
burnout, preventing, Empowerment
business continuity and disaster recovery (BC/DR) programs, Organizations Rethinking Reliability, Introduction to DiRT
business growth, value of SRE, To Business Growth
business value metrics, Capacity Efficiency

## C

canary testing, Canaries-Canary analysis
  - rollout example, An Example Rollout-An Example Rollout
capabilities models, Case study: Large financial services firm
capacity management, Capacity Management 2.0
  - infrastructure improvements, Infrastructure Design
capacity planning, Capacity Planning-Capacity Planning

- accelerator hardware, Utilization, Efficiency, and Capacity Planning
  - centralized fleet management, Centralized Fleet Management to Enable Agility
  - utilization as metric for efficiency, Accelerator Utilization and the Loss Framework-Fragmentation loss
- AI systems, challenges, Practical Observability and Capacity Challenges
- AI, Google case study, Case Study: Scaling Google for the AI Age-Lessons Learned
- automating, Automating Capacity Planning
- business-driven, implementation, Business-Driven Demand-Business-Driven Demand
- capacity isolation, Capacity Isolation and Failure Domains-Capacity Isolation and Failure Domains
  - anticipating demand as a customer, Capacity isolation as a customer
  - anticipating failure domains, Failure domains, Advanced failure domains
  - recommendations, Good enough capacity isolation
- demand forecasting, Demand Forecasting-Demand Forecasting
- Dickerson's hierarchy of service reliability, What Do SREs Do?
- efficiency considerations, Capacity Efficiency-Capacity Efficiency
- Google Meet case study, Case Study: Throwing the Plan out the Window (Google Meet During COVID-19)-Lessons Learned
- greenfield SRE implementations, Establish operational readiness from the start
- iron triangle, Introduction to Core Concepts
- outage and incident planning, Planning for Outages and Incidents-Planning for Outages and Incidents
- overload mitigation, Overload Mitigation Strategies
- overprovisioning, Capacity Efficiency
- principles, Capacity Planning Principles-Capacity Planning Principles
- probabilistic forecasting, Quantify Uncertainty
- reclaiming stranded capacity, Reclaiming Stranded Capacity-Reclaiming Stranded Capacity
- reducing need for, Engineering Ourselves Out of Capacity Planning-Engineering Ourselves Out of Capacity Planning
- resource pooling
  - Flex, Flex: Google's resource pooling system
  - peak of sums, The theory: Sum of peaks versus peak of sums
- scaling composite services, Flex, Scaling composite services-The value of a unified abstraction
- supply planning, implementation, Supply Planning-Supply Planning

- traffic management, Traffic Management and Tagging-Traffic Management and Tagging
- traffic management demand shaping, Crumple zones-Crumple zones
- traffic management overload mitigation strategies, Criticality and load shedding-Criticality and load shedding
- traffic requirements, Understanding Traffic Requirements

CapEx (capital expenditure), Capacity Management 2.0

career management

- attrition and retention, Attrition and Retention-Attrition and Retention
- centralized SRE teams, Career path
- core skills, The Keys to a Successful SRE Career-Teamwork
- individual contributors, The Individual Contributor's Career Path in SRE-The Individual Contributor's Career Path in SRE

Carollo, Jeff, Getting Started with Testing

CAS (complex adaptive system), Theoretical Research in the Field of Safety Science

- failure considerations, How Complex Systems Fail-How Complex Systems Fail
- resilience, Four Concepts for Resilience-Four Concepts for Resilience
- Swiss cheese model, The Swiss Cheese Model

cascading failures, Avoiding Cascading Failures

CAST (Causal Analysis based on Systems Theory), CAST: Backward-Looking Accident Analysis, Applying STPA to the Maps Data Updates Approval Process

- advantages, Why CAST?-Why CAST?
- compared to SRE methods, Contrasting Traditional SRE Methods with STPA/CAST
- Google Maps misnamed cities incident, The Case of the Misnamed Cities
  - analysis process, Applying CAST-Step 5: Create an improvement plan
  - root causes, The Case of the Misnamed Cities-The Case of the Misnamed Cities
- introducing to an organization, demonstrating methods, Adopting CAST: Overcoming Tradition-Efficiency
- postmortems, CAST: A New Method for Postmortems

causal factors, STAMP: A Modern Causality Model for Complex Systems-STAMP: A Modern Causality Model for Complex Systems

causal scenarios, hazard analysis, Step 4: Build Causal Scenarios

causality models, Safety Engineering for SRE with STPA and CAST

- analysis methods, STPA and CAST: Analysis Methods Based on STAMP-CAST: Backward-Looking Accident Analysis
- linear chain of events, Limits of Traditional Causality Models-Limits of Traditional Causality Models

  - STAMP, STAMP: A Modern Causality Model for Complex Systems-STAMP: A Modern Causality Model for Complex Systems

centralized alert configuration service, Automatic Alert Configurations on SLOs-Automatic Alert Configurations on SLOs

centralized organization, Centralization Versus Decentralization-Economies of scale

CFOs, value of SRE to, To the CFO

change management

  - adaptive, Adaptive Change Management
  - risk management, Change Management-Change Management
    - change supervision, Change Supervision-Change Supervision
    - defense in depth, Defense in Depth
    - multiple changes, Change Concurrency
    - progressive rollouts, Progressive Rollout-Progressive Rollout
    - reverting changes, Safe Mitigations-Safe Mitigations
    - risk sensitivity, Risk Tolerance

charter documents, Team Design

charter template

  - SRE teams, Mission
  - team example, Mission

checksums, Checksums-Checksums

  - file corruption case study, Checksums-Checksums

churn, Direct Costs

Clang Static Analyzer, Analysis of C++ code via Tricorder, Clang-Tidy, and Clang Static Analyzer

Clang-Tidy, Analysis of C++ code via Tricorder, Clang-Tidy, and Clang Static Analyzer

client-focused change supervision, Client-Focused Change Supervision

  - benefits, Benefits Realized by Google
  - challenges, Challenges with This Approach
  - implementation, The simple approach
  - metrics discoverability, Using This Data
  - rollout example, An Example Rollout-An Example Rollout
  - tracking through multiple hops, Handling multiple hops

client-side SLOs, Client-Side SLOs

  - addressing undefined denominators, Undefined Denominators-Undefined Denominators
  - high noise floor considerations, High Noise Floor-High Noise Floor
  - instrumentation, Complex Instrumentation

client-side telemetry, Client-Side Telemetry-Client-Side Telemetry

- advantages, Why Client Monitoring-Why Client Monitoring
- architecture, Client Telemetry Architecture Overview
- device considerations, Device considerations
- implementing, Implementation
- privacy and security, Privacy and security in client telemetry collection
- scaling, Scaling-Scaling to the ecosystem

cloud computing, The Cloud Computing Era-The Cloud Computing Era
- capacity management, Capacity Management 2.0
- distributed request tracing, Distributed Tracing as a Critical Primitive
- managed services, Managed Services and Open Standards
- observability, value of open approach to, Democratization of Access
- open standards, Managed Services and Open Standards-Managed Services and Open Standards, The Mythical Single Pane of Glass
- shared state, Shared State
- shift of infrastructure to, From Components to Context

cluster operating systems, Borg, Google's Production Environment

cluster-level file systems, Colossus, Google's Production Environment

collaboration, SRE Is a Dedicated Voice for Reliability, Collaboration
- incident response, Collaboration and Communication-Collaboration and Communication
- product development, Product Development-Product Development
- product management, SRE and Product Management
- service lifecycle engagement, Service Lifecycle Engagement-Service Lifecycle Engagement
- SRE and development functions, Outside SRE-Outside SRE
- SRE engagement, How SRE Collaborates with Its Partners
- SRE engagement with development teams, Effective Communication and Collaboration
- within SRE organizations, Within the broader SRE organization
- SRE small teams, Scaling yourself-Scaling yourself
- SRE-internal, SRE-Internal Collaboration-SRE-Internal Collaboration
- within teams, Within a team

Colossus (cluster-level file system), Google's Production Environment

communication, incident response, Collaboration and Communication-Collaboration and Communication

complex adaptive system (see CAS)

compliance, trends, Digital Sovereignty and Embedded Compliance

compute abstraction, Infrastructure Trends

confidence, assessing, Benchmarking Culture Through Confidence-Benchmarking Culture Through Confidence

config as code, Configuration basics
configuration
  – drift, Configuration drift
  – management, infrastructure improvements, Infrastructure Design
  – testing considerations, Configuration basics-Configuration basics
  – tests, Configuration tests
consensus-driven incident response, Alternatives
consistency, software engineering mindset, A Software Engineering Approach to Operations
consulting, SRE engagement scope, Consulting
consumer products, engagement model, SRE for Consumers Versus Enterprises-Organizing Teams
context windows, Core ML Concepts
continuous education, Continuous education
  – incident response training, Training and Development
continuous integration pipelines, Google's Production Environment
continuous preparedness
  – hierarchy of production health, What Do SREs Do?
  – incident response, Continuous Preparedness-Learning from Failure
  – production health, Continuous Preparedness-Continuous Preparedness
continuous profiling, observability, Observability and Monitoring
continuous training, Core ML Concepts
Conway's law, The Social SDLC
Cook, Richard, How Complex Systems Fail
core competencies, SRE, Identifying your target audiences and their training needs
cost-based view of ecosystem risks, Probabilities
cost-effectiveness, incident hazard analysis, Why STPA?
coupling, building platforms, Abstractions and Coupling
criticality, traffic tagging, Traffic Management and Tagging
Crowdstrike, software update incident response, IT Disruptions After Crowdstrike Software Update
CUIs (critical user interactions), Measuring Experienced Reliability
  – supporting infrastructure, Supporting infrastructure-Supporting infrastructure
CUJ (critical user journey), The Basics of SLOs
  – automated change supervision, Automated CUJ change supervision-Automated CUJ change supervision
  – client experience monitoring, Measuring Experienced Reliability
  – CUJ-focused SLOs, CUJ-focused SLOs-CUJ-focused SLOs
  – importance of, Critical User Journeys

- incident response, Response CUJs-Response CUJs
  - training, Training and Practicing-Training and Practicing
- measuring experienced reliability, Critical User Journeys
- supporting infrastructure, Supporting infrastructure-Supporting infrastructure

cultural principles, SRE Is a Dedicated Voice for Reliability
cultural tenets, production health, Sociotechnical Foundations
culture, Key Elements of a Reliability-Focused Culture
- (see also organizational culture)
- importance for production health, Sociotechnical Foundations

customer data, managing, Data Categorization-Data Categorization
customer-centric alerting, The Motivation for Per-Customer Reliability
customer-centric monitoring, Customer-Centric Monitoring
- CUJ-focused SLOs, CUJ-focused SLOs-CUJ-focused SLOs
- measuring reliability, Measuring Experienced Reliability-Measuring Experienced Reliability
- outage prevention and detection, Defense in Depth
  - automated CUJ change supervision, Automated CUJ change supervision-Automated CUJ change supervision
- supporting infrastructure, Supporting infrastructure-Supporting infrastructure

customers, value of SRE to, To Customers-To Customers
Cynefin framework, decision-making domains, Complexity-Complexity

## D

dashboards
- creating automatically, From Investigation to Automatic Mitigation
- templates, From Manual to Out-of-the-Box Dashboards-From Manual to Out-of-the-Box Dashboards

data
- categorization, Data Categorization-Data Categorization
- Google approach to retention, Google's Strategic Approach to Data Retention-Google's Strategic Approach to Data Retention
- inconsistencies, causes, Application-level verification
- observability, value versus cost, Observability Data—Value Versus Cost-Adapting for the Future
- regulatory compliance, Observability Data: Privacy, Compliance and Security Concerns, Compliance by Design-Encrypted data

data classification, Data Classification
- high-value personal data, High-Value Personal Data-High-Value Personal Data

  - original data compared to derived data, Original Data Versus Derived Data-Original Data Versus Derived Data, Identifiable Versus Nonidentifiable Data
data ingestion, The AI Infrastructure Explosion
data integrity, The Hierarchy of Data Needs-Data Integrity
  - application-level verification, Application-level verification-Application-level verification
  - checksums, Checksums-Checksums
  - consistency, Consistency checks
  - resiliency, Data resiliency
data lakes, observability, Observability and Monitoring
data management
  - backup plans, Creating a Backup Plan
    - configuration, Decide on the Backup Configuration for Each Bucket
    - data source catalog, Classify Your Data Sources
    - implementing, Implement the Backup Plan
    - lifecycle components, The Planning Framework
    - setting objectives, Set the Objectives for Each Bucket
    - writing, Write the Backup Plan-Write the Backup Plan
  - backups
    - smart compared to simple, Smart or Simple?-Smart or Simple?
    - types, Full backups-Differential backups
  - change management, Progressive Rollout
  - data availability, Data Availability-Data Availability
  - data classification, Data Classification
    - high-value personal data, High-Value Personal Data-High-Value Personal Data
    - identifiable data compared to nonidentifiable data, Identifiable Versus Nonidentifiable Data
    - original data compared to derived data, Original Data Versus Derived Data-Original Data Versus Derived Data
  - data efficiency, Data Efficiency-Striping data across regions
  - ethics, Ethical Concerns
  - failure scenario defenses
    - hardware failures, Data Unavailability or Loss Due to Hardware Failure-Data Unavailability or Loss Due to Hardware Failure
    - operator error or malice, Operator Error or Malicious Action
    - region failures, Data Unavailability or Loss Due to Region Failure
    - software bugs, Bad Data Written by Applications
    - storage system corruption, Data Destroyed or Corrupted by a Storage System
  - failure scenarios, What Failure Scenarios Do You Need to Consider?

- hierarchy of data needs, The Hierarchy of Data Needs
- infrastructure improvements, Infrastructure Design
- legal issues
  - data residency, Data residency
  - data retention, Data retention
  - data usage, Restrictions on usage of data-Restrictions on usage of data
  - user age, Age of your users
- PITR (point-in-time-recovery), Point-in-Time Recovery
- restore policy, creating, Creating a Data Recovery Policy-Creating a Data Recovery Policy
- restores, testing, Restore Testing-Restore Testing, Decide How You Will Perform Restore Testing
- SLOs, SLOs-Restore Time Objective
  - Restore Window Objective (RWO), Restore Window Objective (RWO)-Restore Window Objective (RWO)
- snapshots compared to backups, Snapshots Versus Backups-Snapshots Versus Backups

data processing, The AI Infrastructure Explosion

data replication, Replication
- asynchronous replication, Considerations When Deciding Whether to Use Replication
- handling replica loss, Single-leader topologies-Single-leader topologies
- implementation considerations, Considerations When Deciding Whether to Use Replication-Considerations When Deciding Whether to Use Replication
- multileader topology, Considerations When Deciding Whether to Use Replication
- single-leader topology, Considerations When Deciding Whether to Use Replication
- synchronous replication, Considerations When Deciding Whether to Use Replication

data security, The Hierarchy of Data Needs, Data Security
- data access considerations, Data access-Data access
- test data considerations, Test data

data sources, observability, Observability and Monitoring

databases, Spanner, Google's Production Environment

datacenters, large-scale fault-tolerance scenarios, Modeling Large-Scale Outages

debugging
- production scaling issues, Production Debugging
- as training, Team and service-specific training

decentralized organization, Centralization Versus Decentralization-Economies of scale
decision-making domains, Complexity-Complexity
defense in depth, Limits of Traditional Causality Models, Defense in Depth
  - Swiss cheese model, The Swiss Cheese Model
demand forecasting, Demand Forecasting-Demand Forecasting
dependency management, Dependency Management
  - controls, Representations and Controls
  - dependency failures, Resilience to Dependency Failures
  - fallback availability, Managing Fallbacks
  - system representation, Representations and Controls-Representations and Controls
dependency modeling, Representations and Controls-Representations and Controls
dependency relationships, attributes, Representations and Controls
dependents, risk management, Defense of Dependents-Defense of Dependents
deployments
  - automated, Establish operational readiness from the start
  - fixed-cadence compared to SLO-gated, From cadenced deployments to SLO-gated deployments
  - models, The AI Infrastructure Explosion
developer platform, Boq, Platformization
development
  - Dickerson's hierarchy of service reliability, What Do SREs Do?
  - products, collaboration, Product Development-Product Development
devices, client telemetry, Device considerations-Device considerations
DevOps, SRE Is a Dedicated Voice for Reliability
  - shift left principle, Platforms as Ecosystems
Dickerson, Mikey, What Do SREs Do?
Dickerson's hierarchy of service reliability, What Do SREs Do?-What Do SREs Do?
differential backups, Differential backups
Digital Markets Act (DMA), Restrictions on usage of data
digital sovereignty, Infrastructure Trends, Digital Sovereignty and Embedded Compliance, Data residency
DiRT (Disaster Resilience Testing), Training and Development, Why STPA?, Introduction to DiRT-Introduction to DiRT
  - service-level resilience testing, Modeling service-level tests-Modeling service-level tests
disaster recovery, Snapshots Versus Backups
  - (see also backups; restores, testing; snapshots compared to backups)

distributed request tracing, Distributed Tracing as a Critical Primitive
DMA (Digital Markets Act), Restrictions on usage of data
documentation
  - team charters, Team Design
  - value of, Team and service-specific training
DORA, DORA's Findings on Culture and Performance-DORA's Findings on Culture and Performance
  - benefits of healthy culture, The Empirical Link: Culture and Performance-SRE Practices, Reliability, and Practitioner Well-Being
  - culture and performance, The Empirical Link: Culture and Performance
  - getting stakeholder buy-in, Getting Executive Support
downtime, cost of, Opportunity Costs
Drucker, Peter, Sociotechnical Foundations
dynamic dashboard templates, From Manual to Out-of-the-Box Dashboards-From Manual to Out-of-the-Box Dashboards
dynamic testing, Configuration tests

## E

early-stage organizations, SRE practices, Early-Stage and Smaller Organizations-Design review
eBPF (Extended Berkeley Packet Filters), The Opportunity of eBPF with Observability
education (see continuous education)
efficiency, software engineering, A Software Engineering Approach to Operations
embedded regulatory logic, The Trend Toward Intent-Based Coordination Systems
embedded SRE engagement scope, Embedded
emergency mode
  - incident modes, Incident Modes-Incident Modes
  - incident responders, For Incident Responders-For Incident Responders
  - incident response, Emergency Mode
  - leadership, For Leadership
  - system developers, For System Developers-For System Developers
emergent properties, systems theory, STAMP: A Modern Causality Model for Complex Systems
emergent reliability
  - business process changes, The Organizational Shift-The Organizational Shift
  - hierarchy of production health, What Do SREs Do?
  - levels of autonomy, The Path to Autonomy-The Path to Autonomy
    - AI Operator case study, Case Study: AI Operator-Case Study: AI Operator

- production infrastructure, Emergent Reliability

empowerment, Empowerment-Empowerment

encrypted data, observability, Encrypted data

energy consumption, AI infrastructure, Energy Consumption and Sustainability-Safety Principles

engagement models, What Is an SRE Engagement Model?-What Is an SRE Engagement Model?, SRE for Consumers Versus Enterprises

- (see also SRE engagement models)
- communication and collaboration, Effective Communication and Collaboration-Effective Communication and Collaboration
- focus, Scoping SRE Engagements
- impact, The "What": Impact
- mode, The "How": Intent-The "How": Intent
- organizational maturity, Maturity Matrices
- roles, Improved Understanding of Roles
- scope, Scoping SRE Engagements-Blended
  - implementation considerations, Scoping Considerations-Scoping Considerations
- shared understanding of goals, Shared Understanding of Objectives
- value, The "Why": Value-The "Why": Value

enterprise products, engagement model, SRE for Consumers Versus Enterprises-Organizing Teams

environments

- heterogenous, applying SRE practices, Heterogeneity and silos-Heterogeneity and silos
- hybrid and legacy, SRE Applied in Hybrid and Legacy Environments
- testing, Testing Basics-Testing Basics

error budgets, Error Budgets: SLO-Driven Operations, The Basics of SLOs

- key weakness, Weaknesses of the SLO Model
- SRE engagement considerations, SLOs and error budgets-SLOs and error budgets

error rates

- alerting with machine learning model, Handling Cyclical Metrics with Machine Learning
- post-alert analysis, A Cost-Effective Application: Post-Alert Analysis
- Wilson's confidence interval, A Statistical Approach for Error Rates

errors, client-side SLOs, High Noise Floor-High Noise Floor

escalation rotations, on-call rotation, Escalation Rotations

escape hatches, production platform policy exceptions, Exceptions

ethics, data management, Ethical Concerns

Etsy case study, incident response, Case Study: Incident Response and Management at Etsy-Takeaways
European Union's General Data Protection Regulation (GDPR), Data retention
evals, model testing, Agentic Testing
everything SRE engagement scope, Kitchen Sink
executive support for SRE, Getting Executive Support-Getting Executive Support
expectations management, Expecting perfection-Believing it's one and done
Extended Berkeley Packet Filters (eBPF), The Opportunity of eBPF with Observability

## F

failure domains, Failure Domains-Failure Domains
- aligning deployments to, Aligning Failure Domains-Aligning Failure Domains
- global state loss prevention, Preventing Loss
- recovering, Recovering Failure Domains-Recovering Failure Domains
- types, Type of Failures and Domains-Type of Failures and Domains

failure probabilities, risk management, Probabilities-Probabilities
Falzone, Tim, Step 1: Scope the Analysis
fast burn alerts, Automatic Alert Configurations on SLOs-Automatic Alert Configurations on SLOs
fault injection testing, Resilience tests, Fault Injection Testing
- infrastructure testing, Testing Infrastructure
- service dependencies testing, Testing Dependencies
- test design, Getting Started with Fault Injection Testing-Getting Started with Fault Injection Testing
- usefulness, Why Fault Injection?

fault-tolerance simulation, large-scale, Modeling Large-Scale Outages
feature velocity, reduction in unreliable systems, Reduced Velocity
features, role of SLOs, Feature promises versus reliability guarantees
feedback, production platform users, Feedback-Feedback
Fiat Cryptography, Fiat Cryptography and BoringSSL
file corruption case study, Checksums-Checksums
financial impact, reduction in unreliable systems, Penalties
financial management, capacity planning, Capacity Management 2.0
FinOps (financial operations), Capacity Management 2.0
five nines, The Case for Culture
fixed-cadence deployments compared to SLO-gated deployments, From cadenced deployments to SLO-gated deployments
Flex, Flex: Google's resource pooling system

- scaling composite services, Scaling composite services-The value of a unified abstraction
formal testing methods, Formal Methods
- at Google, Use of Formal Methods at Google-Agentic tool use (level 3)
- reliability of, Formal Methods
- TLA+, Using Formal Methods-Using Formal Methods
formal training programs, SRE EDU Orientation, Formal training programs-On-call curriculum
foundational offerings, SRE engagement, An Outcome-Focused Approach
four golden signals of monitoring, Observability and Monitoring
full backups, Full backups
full tier (SRE engagement), A Tiered Engagement Model
functional requirements (FRs), Measuring Experienced Reliability-Measuring Experienced Reliability
- software development, The SDLC and Non-Functional Requirements
funding model, The Early Engagement Model (PRRs)
future of SRE, Leadership and the Interpretation of Value, What Won't Change
fuzzing, Other kinds of tests

## G

GDPR (European Union's General Data Protection Regulation), Data retention
generative organizational culture, characteristics, Characteristics of a Generative Culture-Characteristics of a Generative Culture
geopatriation, Infrastructure Trends

- safety architecture considerations, The Safety and Reliability of AI Solutions

hierarchy of tests, Models of Testing-Models of Testing
high-availability monitoring systems
- design considerations, High-availability monitoring systems
- user experience considerations, Seamless User Experience

high-availability telemetry, High-Availability Telemetry-High-Availability Telemetry
high-cardinality data, Quality over Quantity
hiring
- challenges, SRE Hiring Antipatterns-SRE Hiring Antipatterns
- incident response training, Training and Development
- new graduates, Hiring New Graduates into SRE: A Case Study in Ireland
  - building skills, Raising awareness and skill building
  - challenges, Identifying the challenges-Identifying the challenges
  - implementing hiring program, Collaborating effectively with staffing teams-Collaborating effectively with staffing teams
  - introducing to SRE, Strategies for forging new SREs from new graduates-Strategies for forging new SREs from new graduates
  - placement strategies, Strategies for forging new SREs from new graduates-Strategies for forging new SREs from new graduates
- SREs, Hiring SREs-Hiring SREs
  - candidate attributes, Attributes of a Successful SRE-Attributes of a Successful SRE
  - process, The Hiring Process-The Hiring Process

HMD (Horizontal Monitoring Data), Horizontal Monitoring Data: A Centralized Approach-Horizontal Monitoring Data: A Centralized Approach
Hollnagel, Erik, A Tale of Two Safeties
horizontal alerts, From Static Thresholds to Intelligent Alerting
Horizontal Monitoring Data (HMD), Horizontal Monitoring Data: A Centralized Approach-Horizontal Monitoring Data: A Centralized Approach
horizontal view of ecosystem risks, The Role of Leadership
human actions, hazard analysis, Why STPA?-Why STPA?
hybrid and legacy environments, SRE Applied in Hybrid and Legacy Environments
Hyrum's law, Implicit SLOs
- qualifying ML models, How SRE Qualifies New Architectures and Models

## I

idle capacity (efficiency metric), Capacity Efficiency

IMAG (Incident Management at Google), Escalation Rotations-Escalation Rotations, SRE Managing Real-World Safety: An Example with Waymo
  - crisis coordination considerations, When SRE is—and is not—a good fit for crisis coordinator-When SRE is—and is not—a good fit for crisis coordinator
  - Waymo
    - incident response model, SRE coordinating a large-scale crisis-SRE coordinating a large-scale crisis
    - on-call rotation, Traditional role of SRE on-call
    - safety-forward, non-engineering emergencies, Why SRE can manage a crisis and not just an outage-Why SRE can manage a crisis and not just an outage
implicit SLOs, Implicit SLOs-Implicit SLOs
incident analysis, Evolving the Learning from Incident Practices
incident detection and analysis, From Metrics to Meaning-From Metrics to Meaning
  - Detectr platform, Case Study: Detectr-Case Study: Detectr
incident investigation, analytics telemetry, Analytics Telemetry-Analytics Telemetry
incident management, Observability and Monitoring
  - automation, Example: Incident Management-Example: Incident Management
  - crisis coordination considerations, When SRE is—and is not—a good fit for crisis coordinator-When SRE is—and is not—a good fit for crisis coordinator
  - human skills, The Ghost in the Machine
  - IMAG, Escalation Rotations-Escalation Rotations
  - judgment, Developing judgment
  - leadership skills, Adapting leadership skills
  - rotations, Foundations of On-Call
    - (see also on-call requirement)
  - SRE engagement considerations, Incident management
  - staying calm, Staying calm in crisis
  - systems thinking, Cultivating systems thinking
  - training, Training and Development
  - Waymo safety-forward, non-engineering emergencies, Why SRE can manage a crisis and not just an outage-Why SRE can manage a crisis and not just an outage
Incident Management at Google (see IMAG)
incident mitigation, high-availability telemetry, High-Availability Telemetry-High-Availability Telemetry
incident response, Continuous Preparedness
  - AI, The Role of AI in Incident Response
    - change management considerations, Autonomy in Production

  - detection and triage, Detection and Triage
  - human oversight considerations, A North Star for Agent Safety-A North Star for Agent Safety
  - hypothesis generation, Hypothesis Generation
  - investigation, Investigation
  - on-call handoff, On-call Handoff
  - outage communication, Outage Communication
- AI agents
  - generating incident-specific insights, Managing Incident Complexity-Managing Incident Complexity
  - response goals, Mitigation Versus Root Cause Analysis-Mitigation Versus Root Cause Analysis
- antipatterns, Collaboration and Communication
- collaboration and communication, Collaboration and Communication-Collaboration and Communication
- detection, Detection
- Dickerson's hierarchy of service reliability, What Do SREs Do?
- emergency mode, Emergency Mode
- Etsy case study, Case Study: Incident Response and Management at Etsy-Takeaways
- incident lifecycle, The Lifecycle of an Incident
- incident modes, Incident Modes-Incident Modes
- increase in system complexity, Incidents
- investigation, Investigation
- learning, Learning
- mitigation, Mitigation
- OODA model, OODA
- requirements for effective response, Access and authority during incidents-Access and authority during incidents
- requirements for reliability and supportability, Autonomy and authority to prevent incidents-Autonomy and authority to prevent incidents
- resolution, Resolution
- response CUJs, Response CUJs-Response CUJs
  - training, Training and Practicing-Training and Practicing
- root cause analysis, Root cause analysis
- triage, Triage-Triage
- Waymo model, SRE coordinating a large-scale crisis-SRE coordinating a large-scale crisis

Incident Response Management (IRM) platform, Example: Incident Management
incident response teams (see IRTs)

incidents, Incidents, Outages, and Bugs
- approach to learning from, Theoretical Research in the Field of Safety Science-Theoretical Research in the Field of Safety Science
  - failure in complex systems, How Complex Systems Fail-How Complex Systems Fail
  - Paris Data Center outage, Case Study: Paris Data Center Outage-Outcome
  - resilience, Four Concepts for Resilience-Four Concepts for Resilience
  - risk management, Risk Management in a Dynamic Society
  - Safety I and Safety II systems, A Tale of Two Safeties-A Tale of Two Safeties
  - Swiss cheese model, The Swiss Cheese Model
- blameless postmortems, Principles and Practices
- learning lifecycle, Example: Incident Management
- mitigation as acceptable toil, Toiling to mitigate
- planning for, Planning for Outages and Incidents-Planning for Outages and Incidents
- postmortems
  - operationalizing the principles, Operationalizing the Principles
  - principles, Foundations
  - sociotechnical system applied to learning, Evolving the Learning from Incident Practices-Evolving the Learning from Incident Practices
incremental backups, Incremental backups
inference, model serving, Core ML Concepts
informal learning methods, Informal learning methods-Informal learning methods
infrastructure
- AI integration, The AI Infrastructure Explosion-The AI Infrastructure Explosion
- customer-centric monitoring, Supporting infrastructure-Supporting infrastructure
- emergent reliability, Emergent Reliability
- Google production infrastructure, Google's Production Environment-Google's Production Environment
- SRE engagement scope, Infrastructure
- tests, Test infrastructure and best practices
- trends, Infrastructure Trends-Infrastructure Trends
infrastructure design, Infrastructure Design
- adaptive change management, Adaptive Change Management
- elimination of toil, Eliminating Toil-Eliminating Toil
- hierarchy of production health, What Do SREs Do?
- production health, Infrastructure Design-Infrastructure Design
- verifying resilience, Verifying Resilience-Verifying Resilience
inorganic capacity demand, Demand Forecasting

instructional design, Designing Effective Training Content
integration tests, Integration tests
intelligent alerts, From Static Thresholds to Intelligent Alerting-From Static Thresholds to Intelligent Alerting
internal technical teams, value of SRE to, To Other Internal Technical Teams-To Other Internal Technical Teams
interview process, hiring SREs, The Hiring Process
intrinsic product metrics, capacity planning, Business-Driven Demand
IRM (Incident Response Management) platform, Example: Incident Management
IRTs (incident response teams), Incident Response Teams
- alternatives
  - consensus-driven response, Alternatives
  - executives as incident commanders, Executives as incident commanders
- organization
  - federating incident response, Organization-Large organizations: Federating incident response
  - per-incident swarm model, Small organizations: Bootstrapping the first IRT-Small organizations: Bootstrapping the first IRT
- technical policy influence, Influence on Organizational Technical Policy
- trade-offs, Potential Drawbacks-Potential Drawbacks

## J

Jevons paradox, The Role of Humans

## K

kitchen sink engagement scope, Kitchen Sink
knowledge graphs, Observability and Monitoring-Observability and Monitoring
knowledge-sharing sessions, Team and service-specific training
KPIs (key performance indicators), scorecards, Scorecards-Case study: National retail chain

RPOs (see Recovery Point Objectives)
RTOs (Recovery Time Objectives), Organizations Rethinking Reliability
rule-oriented culture, Westrum's Typology of Organizational Culture
runbooks, Establish operational readiness from the start

## S

safety engineering, Why Systems Theory and Safety Engineering Matters for SRE
- compared to SRE methods, Contrasting Traditional SRE Methods with STPA/CAST

Safety I system, A Tale of Two Safeties-A Tale of Two Safeties
Safety II system, A Tale of Two Safeties-A Tale of Two Safeties
SAIF (Secure AI Framework), Security and Compliance
scaling
- automation, Scaling Automation
  - capacity provisioning example, Example: Capacity Provisioning-Example: Capacity Provisioning
  - incident management example, Example: Incident Management-Example: Incident Management
- client telemetry, Scaling-Scaling to the ecosystem

schedulers, ML workloads, Scheduling Primitives-Scheduling Primitives
schedules, on-call rotation, Hours of Availability
scorecards
- advantages and limitations, Why Are Scorecards Hard to Get Rid Of?
- KPIs, Scorecards
  - risks of, Why Do They Fall Short?
- ProdEx program, Case Study: ProdEx—Google's Production Excellence Program
- use, Effective Scorecard Use-Case study: National retail chain

SDC (silent data corruption), Checksums
SDLC (software development lifecycle), The Software Development Lifecycle-The Software Development Lifecycle
- AI dev

- effect on production work, Production Work in the Era of AI Dev
- effect on resolving production problems, Rate of Change-Rate of Change
- cost and speed improvements, implications, The SDLC Under Tension and Transition
- nonfunctional and functional requirements, The SDLC and Non-Functional Requirements
- social interaction during, The Social SDLC
- SRE engagement, Service Lifecycle Engagement

SDO performance, The Empirical Link: Culture and Performance
Secure AI Framework (SAIF), Security and Compliance
security
- AI system challenges, Threats and Challenges-Threats and Challenges
- client telemetry, Privacy and security in client telemetry collection
- E2E observability, E2E Observability Privacy and Security Considerations-E2E Observability Privacy and Security Considerations
- risk identification considerations, SRE for Security and Privacy-SRE for Security and Privacy

semantic testing, Configuration tests
service disruptions, addressing, Undefined Denominators
service level agreements (SLAs), The Basics of SLOs
service level indicators (see SLIs)
service level objectives (see SLOs)
service lifecycle, SRE engagement, Service Lifecycle Engagement-Service Lifecycle Engagement
service-level resistance testing, Modeling service-level tests-Modeling service-level tests
service-oriented architecture, Google's Production Environment
services
- assessing with maturity matrix, Assess maturity and discover baseline reliability
- automation, Levels of Automation
- failure domains, Failure Domains-Failure Domains
  - aligning deployments to, Aligning Failure Domains-Aligning Failure Domains
  - types, Type of Failures and Domains-Type of Failures and Domains
- growing complexity of, Complexity, Scale, and Risk-Complexity, Scale, and Risk
  - capabilities needed, Structuring for Evolution-Structuring for Evolution
- runbooks, Establish operational readiness from the start
- selecting for initial SRE implementation, Select your starting point
- shared state, Shared State

- sizing services, automation tools, Example: Capacity Provisioning-Example: Capacity Provisioning
shadowing, Informal learning methods
shared state, Shared State
shift down, Shift Left Turns Into Shift Down
- embedding reliability in platforms, Shifting Left and Shifting Down
shift left, Platforms as Ecosystems, Shift Left Turns Into Shift Down
Shook, John, How Learning Drives Culture
silent data corruption (SDC), Checksums
simple backups compared to smart, Smart or Simple?-Smart or Simple?
simulations, Informal learning methods
situational awareness
- AI impact assessment, AI Impact Assessment
- hierarchy of production health, What Do SREs Do?
- incident detection, From Metrics to Meaning-From Metrics to Meaning
  - Detectr platform, Case Study: Detectr-Case Study: Detectr
- production health, Situational Awareness-Situational Awareness
SLAs (service level agreements), The Basics of SLOs
SLIs (service level indicators), The Basics of SLOs
- defining, Trustworthy SLIs
- selecting, Selecting SLIs and Thresholds
  - recommendations, Recommendations for Beginners-Recommendations for Beginners
- types, Recommendations for Beginners
SLO-eligible accelerators, What It Means for Accelerators to be SLO-Eligible
SLO-gated deployments, compared to fixed-cadence deployments, From cadenced deployments to SLO-gated deployments
SLOs (service level objectives), The Basics of SLOs-The Basics of SLOs
- adoption challenges, Pitfalls and Remedies in SLO Adoption-Pitfalls and Remedies in SLO Adoption
  - overcoming, Pitfalls and Remedies in SLO Adoption
- AI optimizations, Supporting infrastructure
- AI systems, Service Level Objectives in AI Systems-Service Level Objectives in AI Systems
- availability reporting, failure concentration, Measuring SLO Failure Concentration-Measuring SLO Failure Concentration
- client-side, Client-Side SLOs
  - addressing undefined denominators, Undefined Denominators-Undefined Denominators
  - high noise floor considerations, High Noise Floor-High Noise Floor

  - instrumentation, Complex Instrumentation
- composition strategies, Composing SLOs-The important caveat: Correlation
  - parallel dependencies, Parallel Dependencies (with Hedging)
  - serial dependencies, The Mathematics of Composing SLOs
- critical user journey-focused, Critical User Journeys
- data management, SLOs-SLOs
  - Recovery Point Objective (RPO), Recovery Point Objective
  - Restore Time Objective (RTO), Restore Time Objective
  - Restore Window Objective (RWO), Restore Window Objective (RWO)-Restore Window Objective (RWO)
- defining for brownfield SRE implementations, Define initial SLOs
- defining for greenfield SRE implementations, Use SLOs as a design input
- error budgets, Error Budgets: SLO-Driven Operations
- external versus internal, External Versus Internal
- implicit, Implicit SLOs-Implicit SLOs
- labels, SLO Taxonomy-SLO Taxonomy
- meeting for greenfield SRE implementations, Engineer the system to meet the SLOs
- ML goodput, Service Level Objectives in AI Systems
- model-serving workloads, Service Level Objectives in AI Systems-Service Level Objectives in AI Systems
- per-customer, Per-Customer SLOs-Per-Customer SLOs
  - benefits, The Motivation for Per-Customer Reliability
  - implementing, How to Implement Per-Customer SLOs-SLO thresholds and burn rate
  - operationalizing, Operationalizing Per-Customer SLOs
- production health, Situational Awareness
- as reliability guarantees, Feature promises versus reliability guarantees
- selecting target percentage, Why Not 100%?-Why Not 100%?
- SLI selection, Selecting SLIs and Thresholds
  - recommendations, Recommendations for Beginners-Recommendations for Beginners
- SRE engagement, Service Lifecycle Engagement
- SRE engagement considerations, SLOs and error budgets-SLOs and error budgets
- system health, Quality over Quantity
- tools and support, SLO Tooling and Support Mechanisms-SLO Tooling and Support Mechanisms
  - automatic alert configuration, Automatic Alert Configurations on SLOs-Automatic Alert Configurations on SLOs

  - weaknesses, Weaknesses of the SLO Model-Weaknesses of the SLO Model

Sloss, Ben Treynor, Step 1: Scope the Analysis

slow burn alerts, Automatic Alert Configurations on SLOs-Automatic Alert Configurations on SLOs

small organizations, SRE practices, Early-Stage and Smaller Organizations-Design review

small teams

  - AI tools, Leveraging AI for help
  - collaboration with coworkers, Scaling yourself-Scaling yourself
  - playbooks, Playbooks-Playbooks
  - prioritizing tasks, Prioritization is key-Prioritization is key
  - scaling challenges, The Solo SRE: Surviving and Scaling SRE in a Startup or as Part of a New, Small Team-The Solo SRE: Surviving and Scaling SRE in a Startup or as Part of a New, Small Team

small teams, first steps, The first 90 days

Smart Ad Selection System, How SRE Supports AI

smart backups compared to simple, Smart or Simple?-Smart or Simple?

smoke tests, Smoke tests

snapshots compared to backups, Snapshots Versus Backups-Snapshots Versus Backups

sociotechnical foundations, production health, What Do SREs Do?-Sociotechnical Foundations

sociotechnical systems, Theoretical Research in the Field of Safety Science, Complexity

  - incidents, Evolving the Learning from Incident Practices-Evolving the Learning from Incident Practices

software development

  - infrastructure design, Infrastructure Design
  - SRE role, Technical Constraints and Obstacles
    - working with third-party software, Closed systems-Closed systems

software development lifecycle (see SDLC)

software engineering, approach to operations, A Software Engineering Approach to Operations-A Software Engineering Approach to Operations

software-defined connectivity, Infrastructure Trends

sovereign cloud requirements, Digital Sovereignty and Embedded Compliance

Spanner (globally consistent database), Google's Production Environment

Spotify, distributed reliability engagement model, Spotify's Distributed Reliability Engagement Model-Trade-offs and Lessons

SRE EDU Orientation program, Benchmarking Culture Through Confidence

  - components, Formal training programs-On-call curriculum

SRE engagement models, What Is an SRE Engagement Model?-What Is an SRE Engagement Model?
- collaboration, How SRE Collaborates with Its Partners
- communication and collaboration, Effective Communication and Collaboration-Effective Communication and Collaboration
- consumer versus enterprise, SRE for Consumers Versus Enterprises
  - commonalities, Engagement Commonalities
  - differences, Engagement Differences-System design
- history, The Evolution of Google SRE's Engagement Model
- impact, The "What": Impact
- mode, The "How": Intent-The "How": Intent
- outcome-focused, An Outcome-Focused Approach-An Outcome-Focused Approach
  - Microsoft Azure example, Case Study: The Microsoft Azure Model-Takeaways
  - Persistent Disk SRE team example, Case Study: Outcomes-Focused Engagements in Persistent Disk-Results
- production readiness reviews, The Early Engagement Model (PRRs)-The Early Engagement Model (PRRs)
  - limitations and alternatives, Beyond Production Readiness Reviews-Beyond Production Readiness Reviews
- purpose, An Outcome-Focused Approach
- roles, Improved Understanding of Roles
- scope, Scoping SRE Engagements-Blended
  - implementation considerations, Scoping Considerations-Scoping Considerations
- shared understanding of goals, Shared Understanding of Objectives
- team organization considerations, Organizing Teams
- tiered, A Tiered Engagement Model-A Tiered Engagement Model
- value, The "Why": Value-The "Why": Value

SRE Software Engineering (SRE-SWE) profile, The Hiring Process
- hiring process, The Hiring Process

SRE System Engineering (SRE-SE) profile, The Hiring Process
- hiring process, The Hiring Process

SRE teams, Within the SRE Team
- charter example, Mission
- charter template, Mission
- engagement with development teams, What Is an SRE Engagement Model?-What Is an SRE Engagement Model?

    - communication and collaboration, Effective Communication and Collaboration-Effective Communication and Collaboration
    - roles, Improved Understanding of Roles
    - shared understanding of goals, Shared Understanding of Objectives
  - organization considerations, Organizing Teams
  - small
    - AI tools, Leveraging AI for help
    - collaboration with coworkers, Scaling yourself-Scaling yourself
    - first steps, The first 90 days
    - playbooks, Playbooks-Playbooks
    - prioritizing tasks, Prioritization is key-Prioritization is key
    - scaling challenges, The Solo SRE: Surviving and Scaling SRE in a Startup or as Part of a New, Small Team-The Solo SRE: Surviving and Scaling SRE in a Startup or as Part of a New, Small Team

staging environments, production scaling issues, Staging and Test Environments

stakeholders

  - assessing reliability during adoption, Have the crucial conversation
  - educating when implementing SRE, Educate your stakeholders
  - executive support, Getting Executive Support-Getting Executive Support

STAMP (Systems-Theoretic Accident Model and Processes) causality model, Engineering a Safer World, STAMP: A Modern Causality Model for Complex Systems-STAMP: A Modern Causality Model for Complex Systems

standardization, effect on resilience, The Role of Uniformity

starter projects, new team members, Project-based learning initiatives-Project-based learning initiatives

storage costs, data, Storage costs

storage systems, Google's Production Environment

  - data replication configurations, Considerations When Deciding Whether to Use Replication
  - features, Data Efficiency-Striping data across regions

storage-compute separation, Infrastructure Trends

STPA (System-Theoretic Process Analysis), STPA: Forward-Looking Hazard Analysis-CAST: Backward-Looking Accident Analysis

  - advantages, Why STPA?-Why STPA?
  - building causal scenarios, Step 4: Build Causal Scenarios
  - compared to SRE methods, Contrasting Traditional SRE Methods with STPA/CAST
  - functional behavior model, Step 2: Model the System-Step 2: Model the System
  - introducing to an organization, Introducing STPA to Your Organization

  - cost effectiveness, Introducing STPA to Your Organization-Introducing STPA to Your Organization
  - countering misconceptions, Introducing STPA to Your Organization-Introducing STPA to Your Organization
  - individual contributors, Introducing STPA to Your Organization
  - principle of fail fast, Introducing STPA to Your Organization
  - selecting system to analyze, Introducing STPA to Your Organization
- Maps data updates approval, Applying STPA to the Maps Data Updates Approval Process
  - incident overview, The Google Maps Incident in Japan
  - return on investment, Results and return on investment
  - STPA process description, Applying STPA-Step 4
- scoping the analysis, Step 1: Scope the Analysis
- unsafe control actions, Step 3: Identify Unsafe Control Actions

strategic incoherence, Strategic Incoherence and Technical Debt

strategic phase, organizational reliability, Strategic

striping data, data storage, Striping data across regions

sublinear scaling, The Value of SRE, Levels of Automation

supply planning, implementation, Supply Planning-Supply Planning

surveys, assessing confidence, Benchmarking Culture Through Confidence-Benchmarking Culture Through Confidence

sustainability constraints, The Trend Toward Intent-Based Coordination Systems

syntax testing, Configuration tests

system atrophy, unreliable systems, System Atrophy over Time

system definitions, Representations and Controls

system design
- analytics monitoring, Analytics monitoring systems
- high-availability monitoring, High-availability monitoring systems
- SRE engagement considerations, System design

system health, Quality over Quantity

system properties, on-call response time, System Properties

system state
- monitoring, Legibility and Introspection
- remediating risk, Remediation

system tests, types, System tests-Regression tests

System-Theoretic Process Analysis (see STPA)

systems theory, STAMP: A Modern Causality Model for Complex Systems, Why Systems Theory and Safety Engineering Matters for SRE

systems thinking, building sociotechnical systems, Complexity

Systems-Theoretic Accident Model and Processes (STAMP) causality model, Engineering a Safer World, STAMP: A Modern Causality Model for Complex Systems-STAMP: A Modern Causality Model for Complex Systems

- test types, Testing Basics
- traditional role, Testing
- traditional, limitations, Limits of Traditional Testing

testing in production (TiP), Testing Basics

tests

- creating from monitoring alerts, Monitoring pre-production
- types, Test Types Defined-Other kinds of tests

theorem proving verifiers, Theorem proving-Theorem proving

- compared to model checking, Comparing the Two Approaches

thresholds, SLIs, Recommendations for Beginners

- latency, Recommendations for Beginners

tiered SRE engagement model, A Tiered Engagement Model-A Tiered Engagement Model

time to detect (TTD), Observability and Monitoring

time to mitigation (TTM), Observability and Monitoring

time to resolve (TTR), Observability and Monitoring

time-series data, observability, Observability and Monitoring

TiP (testing in production), Testing Basics

TLA (Temporal Logic of Actions), Using Formal Methods

TLA+, Using Formal Methods-Using Formal Methods

TLC model checker, Using Formal Methods

toil, Situational Awareness, Why SRE Is Right for Google, Toil-Toil

- AI considerations, AI for Toil Reduction
- applying human judgment, Toiling to apply human judgment
- audits, Autonomy and authority to prevent incidents
- closing product gaps, Toiling to close product gaps
- cost, Why Toil Is a Problem
- elimination of, Eliminating Toil-Eliminating Toil
- identifying true toil, When to Toil
- incident mitigation, Toiling to mitigate
- increased in unreliable systems, Increased Toil
- as learning exercise, Toiling to learn
- limiting production access, Toiling to limit production access
- measuring, Measuring Toil and Defining Success
    - operational workload, Measuring Operational Workload
- reduction strategies, Effective Strategies for Addressing Toil

    - identifying problems, Recognize the real problem
    - issue identification, Identify issues early
    - lessons learned, What doesn't work: Lessons and cautionary tales-What doesn't work: Lessons and cautionary tales
    - long-term goals, Set realistic long-term goals
    - rewarding improvements, Reward improvements
  - scaling, Toiling that scales with the system
  - successful reduction, What Success Looks Like

tokens, Core ML Concepts

tool management, Managing Tooling-Managing Tooling

tools

  - developing, curating the process, Curating Solutions-Curating Solutions
  - observability, standardization considerations, To Standardize or Not to Standardize-To Standardize or Not to Standardize
  - sizing services, Example: Capacity Provisioning-Example: Capacity Provisioning
  - SLOs, SLO Tooling and Support Mechanisms-SLO Tooling and Support Mechanisms
    - automatic alert configuration, Automatic Alert Configurations on SLOs-Automatic Alert Configurations on SLOs
  - TLA+, Using Formal Methods-Using Formal Methods

tools-focused SRE team, engagement scope, Tools

TPMs (technical program managers), Team Roles

traces, Observability and Monitoring

Traffic Director, automation, Coevolution of Distributed Systems and Automation at Scale-Coevolution of Distributed Systems and Automation at Scale

traffic management, Traffic Management and Tagging-Traffic Management and Tagging

  - overload management, Overload Management-Overload Management
  - overload mitigation strategies, Criticality and load shedding-Criticality and load shedding
    - demand shaping, Crumple zones-Crumple zones
  - reclaiming stranded capacity, Reclaiming Stranded Capacity-Reclaiming Stranded Capacity

traffic tagging, Traffic Management and Tagging-Traffic Management and Tagging

training, How Learning Drives Culture

  - applying SRE principles, Training Program Operations-Training Program Operations
  - continuous education, Continuous education

- designing training content, Designing Effective Training Content-Designing Effective Training Content
- effect on organizational culture, Tailoring Training to Different Audiences-Tailoring Training to Different Audiences
- impact on confidence, Benchmarking Culture Through Confidence
- incident management, Training and Development
- individual growth, Learning as a Vehicle for Individual Growth-Managing your individual learning journey
- investment ROI calculation, Calculating the ROI of Training Investment
- managers, Manager training
- methods, Training options by org size
- model creation, Core ML Concepts
- models, Model Creation-Model Creation
- project-based initiatives, Project-based learning initiatives-Project-based learning initiatives
- SREs, Training SREs
  - approaches, Types of SRE training
  - importance of investing in training, The case for investment in training-The case for investment in training
  - organization size considerations, Training options by org size-Training options by org size
  - target audience, Identifying your target audiences and their training needs-Identifying your target audiences and their training needs
- team-specific, Team and service-specific training-Team and service-specific training

training sessions, Within a team

Treynor Curve, The Hiring Process

Tricorder, Analysis of C++ code via Tricorder, Clang-Tidy, and Clang Static Analyzer

troubleshooting

TTM (time to mitigation), Observability and Monitoring

TTR (time to resolve), Observability and Monitoring

## U

UCAs (unsafe control actions), hazard analysis, Step 3: Identify Unsafe Control Actions
unactionable alerts, measuring, Measuring Operational Workload
unit tests, Unit tests
unplanned inorganic capacity demand, Demand Forecasting
user interface (UI), automated systems, User Interface
user-focused culture, Outside SRE
utilization (efficiency metric), Capacity Efficiency

## V

value of SRE, The Value of SRE-Within the SRE Team
verification
- custom hardware design, Formal verification in hardware design
- data integrity, Application-level verification-Application-level verification

verifiers, Model checking
- (see also testing)
- Clang Static Analyzer, Analysis of C++ code via Tricorder, Clang-Tidy, and Clang Static Analyzer
- Clang-Tidy, Analysis of C++ code via Tricorder, Clang-Tidy, and Clang Static Analyzer
- Fiat Cryptography, Fiat Cryptography and BoringSSL
- model checking, Model checking
- model checking compared to theorem proving, Comparing the Two Approaches
- theorem proving, Theorem proving-Theorem proving
- Tricorder, Analysis of C++ code via Tricorder, Clang-Tidy, and Clang Static Analyzer
- verifying network switches, P4-Bar, Verifying behavior of network switches using P4-BAR

versioned configuration, Configuration basics
versioning, rapid code change issues, Versioning
vertical view of ecosystem risks, The Role of Teams
virtual machines (VMs), Infrastructure Trends
visionary phase, organizational reliability, Visionary-Visionary
VMs (virtual machines), Infrastructure Trends
VOIS framework (configuration principles), Configuration basics

## W

The Walt Disney Company, outcome-focused engagement model example, Disney Global SRE: Embedding Reliability Across the Magic-The Results
Waymo, SRE Managing Real-World Safety: An Example with Waymo
Waze, telemetry solutions case study, Case Study: Waze Telemetry over Time
Westrum, Ron, Westrum's Typology of Organizational Culture
Westrum's typology of organizational culture, Westrum's Typology of Organizational Culture-Westrum's Typology of Organizational Culture
Wheel of Misfortune, Within a team
  – incident response training, Training and Development
  – skill erosion mitigation, Skill Erosion
whiteboard talks, Training options by org size, Team and service-specific training
Whittaker, James A., Getting Started with Testing
Wilson's confidence interval, A Statistical Approach for Error Rates
Winters, Titus, Getting Started with Testing
Wright, Hyrum, Implicit SLOs, Getting Started with Testing
